

A Good Deal for U.S. Aluminum

1

Ensure a reliable source of aluminum from trading partners like Canada to support U.S. investments and jobs.

2

Harmonize North American aluminum tariffs under President Trump's Section 232 authority to prevent low-priced aluminum from China and others from entering the country.

3

Deny all Section 232 exclusions for aluminum from China.

TRADE

Strong, targeted trade enforcement

Domestic manufacturers need strong trade remedies and enforcement to compete with government subsidized production. When American aluminum makers compete on a level playing field, we win.

The industry must defend against non-market actors like China which spent

\$60B+

in government subsidies to support its aluminum sector.

Canada is the indispensable trading partner. The U.S. sources

~2/3

of its primary aluminum from Canada and exports \$2B worth of aluminum products to Canada.

Supported by actions by President Trump, the industry has invested

\$10B

in U.S. manufacturing since 2016 of the world.

“President Trump was early to recognize the genuine threat that non-market actors pose to U.S. manufacturing industries like ours.”

Charles Johnson, President & CEO, The Aluminum Association

Aluminum is essential to national defense and security.

It's one of only 11 mineral commodities included on every government critical materials list, including the Department of Defense.

It would require the energy equivalent to at least

4 Hoover Dams

to make the aluminum that the United States currently imports from Canada.

90%

of the aluminum scrap the U.S. industry imports to support recycled aluminum production comes from Canada and Mexico.

Tariffs on aluminum in North America would put thousands of American manufacturing jobs at risk.

1

Canadian aluminum industry job supports

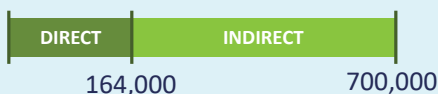

~13

U.S. aluminum industry jobs.

Public support will augment the **\$10B+ in private, U.S. aluminum industry investments since 2013.** To be successful, these investments need reliable access to aluminum from Canada.

Today, the U.S. aluminum industry supports:

AMERICAN JOBS

ECONOMIC OUTPUT
